

Woodlore Portable Sawmill Services

We can custom cut your logs, or resaw your lumber to your specifications on one of our two portable sawmills. We can mill at your site or ours.

Wood-Mizer LT40:

Specs for bandsaw: 36'' diameter log with 24'' wide throat capacity. We can saw logs up to 20' long.

Custom built portable sawmill slabber:

Specs for slab saw: 55'' diameter log. We can saw logs up to 16' long.

Portable sawmill services (either sawmill): \$100/hour, where time starts upon arriving at location of logs, and time stops upon completion of milling last log. If we need to bring our skid steer to move logs, additional fees of \$20/hour apply.

We highly recommend that you use a metal detector on your logs before we mill, because if we hit metal while cutting your logs there is an additional \$40 charge per incident to replace a damaged blade.

If we are trimming your logs to fit on the mill and hit metal with our chainsaw, then a chain fee may apply at the current rate of chain per length damaged.

Long-distance clients: If the logs are located more than 20 miles away from our place of business, additional fees apply as follows:

Mileage fee: \$1/mile. Note that mileage is calculated round-trip. If skid steer is required, this fee is doubled for the two trips required to bring both the sawmill and skid steer to your site.

Hotel fee: \$140/night, as required.
