

## **Woodlore Portable Sawmill Services**

We can custom cut your logs, or resaw your lumber to your specifications on our Wood-Mizer LT50 Wide Hydraulic Portable Sawmill. Specs for bandsaw: 41" diameter log with 34.5" wide throat capacity. We can saw logs up to 21' long. We can mill at your site or ours, but if you wish to kiln dry your wood in our iDry vacuum kiln, it's best to transport logs to Woodlore and mill at our site, then kiln dry here.

**Portable sawmill services: \$110/hour**, where time starts upon arriving at location of logs, and time stops upon completion of milling last log. If we need to bring our skid steer to move logs, additional fees of \$20/hour apply.

We highly recommend that you use a metal detector on your logs before we mill, because if we hit metal while cutting your logs there is an additional \$50 charge per incident to replace a damaged blade.

If we are trimming your logs to fit on the mill and hit metal with our chainsaw, then a chain fee may apply at the current rate of chain per length damaged.

**Long-distance clients:** If the logs are located more than 20 miles away from our place of business, additional fees apply as follows:

Mileage fee: \$1/mile. Note that mileage is calculated round-trip. If skid steer is required, this fee is doubled for the two trips required to bring both the sawmill and skid steer to your site.

Hotel fee: \$140/night, as required.

### **Minimum Fees due:**

Milling at Woodlore: \$150 minimum charge due.

Milling onsite at your location: \$600 minimum charge due
